Reed Replacement Pack

180-Day Supply of Replacement Reeds (14 Reeds)

Reorder#: 1002-01

INSTRUCTIONS FOR USE

- The LUNG FLUTE® (Therapeutic) is indicated for Positive Expiratory Pressure (PEP) therapy.
- Make sure you have carefully read the instructions that came with your LUNG FLUTE® before proceeding with these instructions.
- Your doctor or healthcare provider will train you in the proper way to clean your LUNG FLUTE®; replace the used reed with a fresh reed, and reassemble your LUNG FLUTE® for use in your home care therapy.
- If you are confused or have any questions about these instructions, please contact your doctor or healthcare provider immediately.

1. Removing the mouthpiece from the LUNG FLUTE®

To remove the mouthpiece, rock the mouthpiece back and forth to loosen it from the horn, then pull straight up.

If the above method is challenging, insert a quarter or a butter knife into the slot* located on one side of the mouthpiece, then pry the mouthpiece off of the end of the horn.

* If you own the previous version of the LUNG FLUTE®, the mouthpiece will not have a slot.

2. Removing the old reed from your LUNG FLUTE®

After removing the mouthpiece from your LUNG FLUTE®, pull the old polyester reed out of the horn. Since the reed gets wider at the end, you may have to turn the reed at an angle to get it all the way out of the horn. Throw the old reed away. Never save or reuse old reeds.

3. Cleaning your LUNG FLUTE®

Wash the mouthpiece and horn with mild dish soap and water. Make sure to rinse the parts thoroughly to remove all traces of soap. Do not use abrasive dishwashing pads, scouring pads, or other abrasive cleaning devices on the horn or mouthpiece of your LUNG FLUTE®. Manually dry the pieces or allow them to air dry thoroughly.

4. Installing a new reed in your LUNG FLUTE®

Slide a new reed into the horn of your LUNG FLUTE®. Notice that one end of the reed is wider than the other. Make sure you insert the wider end of the reed first, holding it at an angle to get it through the opening in the narrow end of the horn where the mouthpiece attaches.

Make sure that the wider end of the reed is pointing toward the wider end of the horn, and that the narrow end of the reed is pointing toward the narrow end of the horn.

First, orient the mouthpiece over the horn. The pry-slot can face any direction. You may want to use your thumb to help keep the reed in place while positioning the mouthpiece, as shown above in Figure C. Once the mouthpiece is in position, you will need to secure the mouthpiece to the horn by one of the following methods:

1. Place your thumbs on the corners of the mouthpiece and push down
2. Place the palm of your hand against the mouthpiece and push down
3. Place the mouthpiece and horn upside down on a hard surface and push down on the wider end of the horn.

Notice that there is a slight bend at the narrow end of the reed. Align the narrow end of the reed with the vertical guides on the narrow end of the horn, as shown in Figure A. Make sure the bent end of the reed is facing out, as shown.

Align the bent end of the new reed over the end of your horn, making sure the tab fits within the guides on the horn, as shown in Figure B above. The mouthpiece will hold the reed in place.

* If you own the previous version of the LUNG FLUTE®, align the reeds on the horn with the ribs inside the mouthpiece before replacing the mouthpiece.

WARNINGS:

- Use caution when inserting a new reed into your LUNG FLUTE®. If you accidentally bend or damage a reed, throw it away and replace it with a new one immediately.
- When you have used all of the replacement reeds in this package, order a new package of replacement reeds.
- To avoid possible cross-contamination, never share your LUNG FLUTE® or replacement reeds with another person.
- If your LUNG FLUTE® is visibly soiled or damaged after regular cleaning, throw it away and replace it with a new one.
- If you have any questions about these instructions, please contact your doctor or healthcare professional immediately.
